

Black Tantra **Funscript** Vibrator Guide

Introduction:

This guide will help you set up and use Funscripts to enhance your experience with BlackTantra's extended video and audio files. Funscripts sync sensations with the content, creating an immersive feedback loop that enhances pleasure.

Recommended Toys:

While BlackTantra's Vibration Funscripts should work with all vibrator toys, certain ones are better designed for the experience.

The #1 recommend vibrator toy is:

[The lovense Gush 2](#)

The Gush provides the best hands-free experience and pairs perfectly with all of the hands-free orgasm content BlackTantra offers.

Other Options:

[Diamo](#)

[Max 2](#)

[Hush 2](#)

[Edge 2](#)

Disclaimer:

If you purchase a toy with one of the links above, BlackTantra will earn an affiliate commission. It's another small way to support the project if you want.

Programs & Software Needed:

Before using your toy, you'll need to install a few essential programs on your PC. While there are alternative options, the ones listed here have been tested and proven to work reliably.

This guide is designed for PC, and does not support mobile devices.

#1 [Intiface App](#)

This is the app that connects with your toy.

#2 [MultiFunPlayer](#)

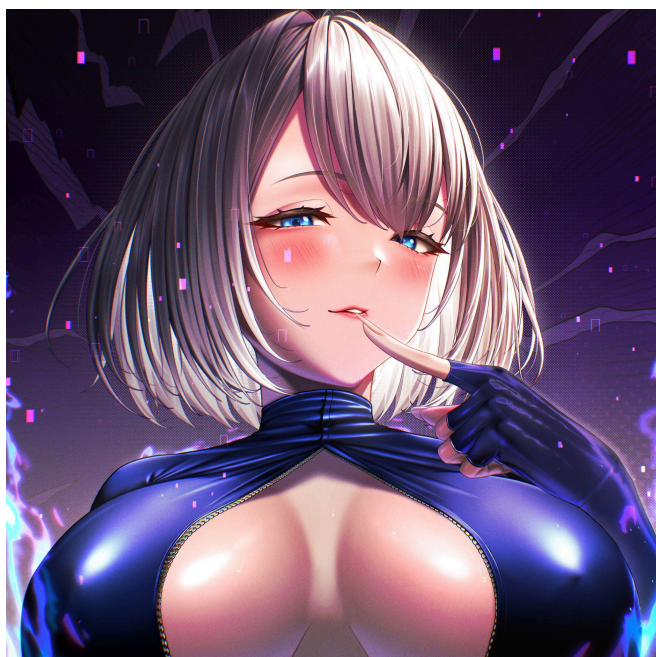

This app allows you to synchronize Funscripts with a video player.

#3 [PotPlayer](#)

This is a simple to use video player that connects with Multifunplayer. Alternatively you can use VLC and some others as well, but it requires a bit more technical setup.

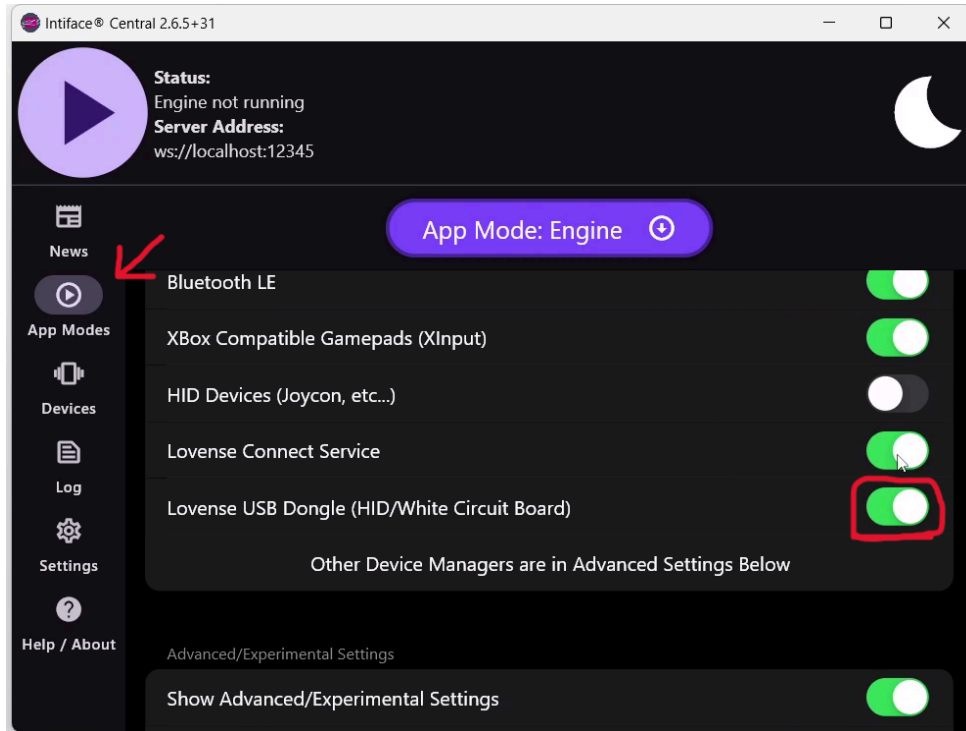

#4 [Funscript & Video Files](#)

If you have an active Patreon subscription you can download the Funscripts from the access folders on the [website](#).

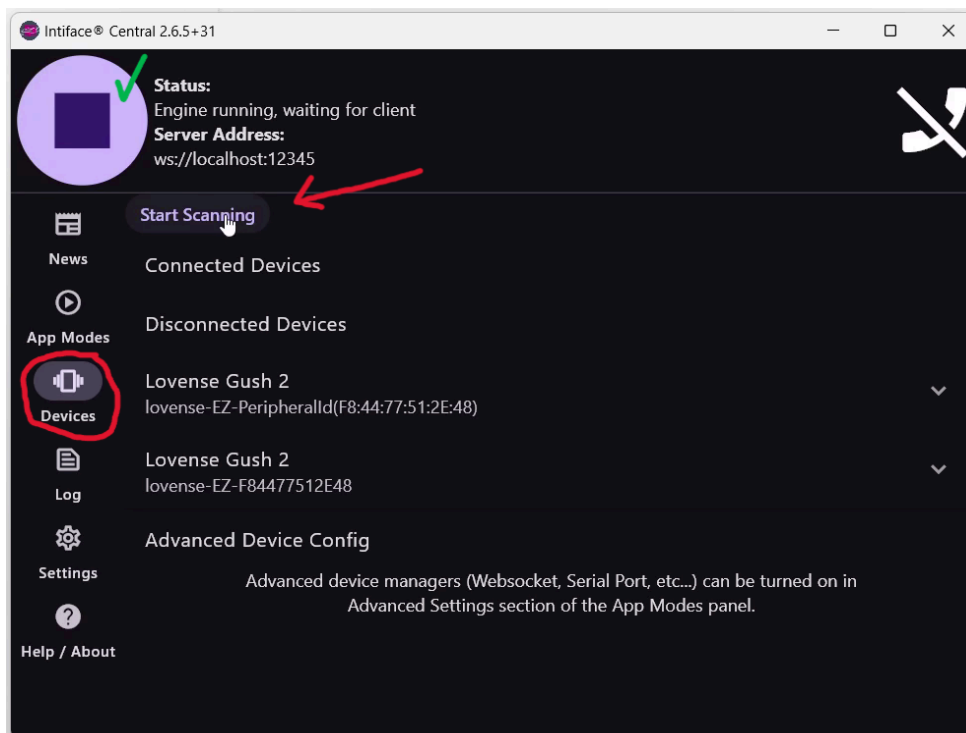

Step #1 Launch Intiface App & Connect Toy

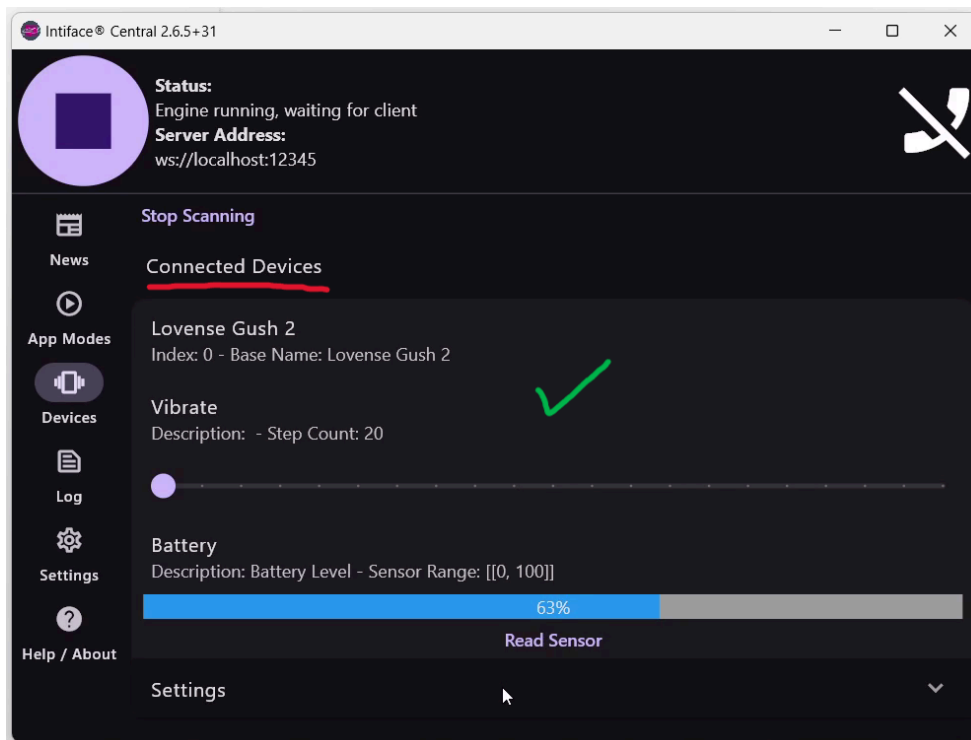

Launch the application and then navigate to App Modes. If you are using a Lovense USB dongle you will want to enable it here. You can also just connect directly via bluetooth.

Make sure that the server is running by clicking the button in the top left. It will say "Engine Running". You can turn on your toy and then navigate to Devices and click "Start Scanning".

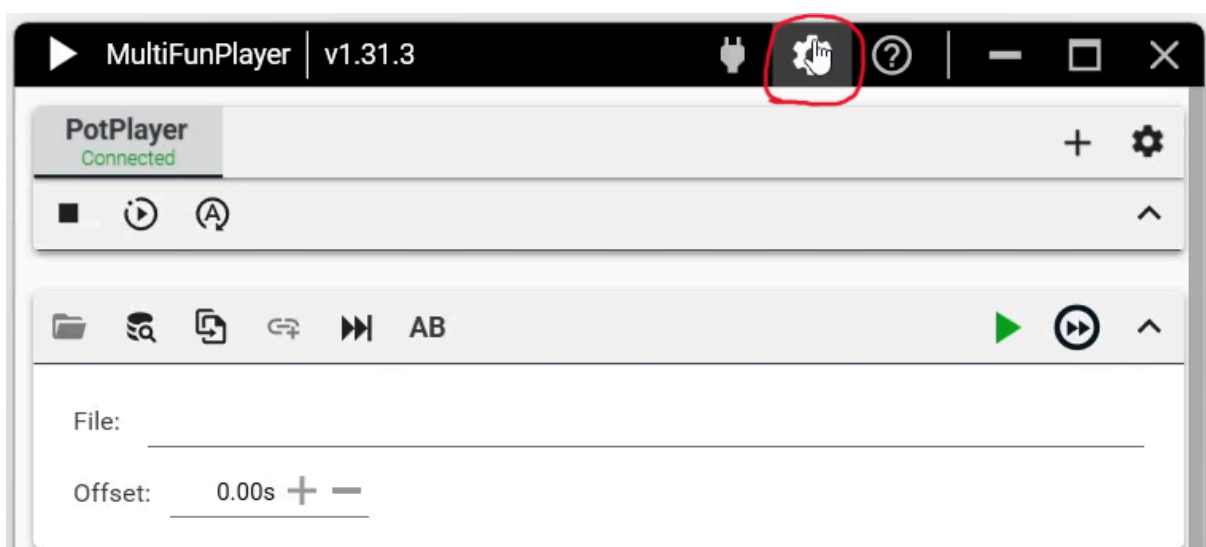

Once your device is connected it will show up like this, you can click “Read Sensor” to check the battery life.

Step #2 Launch MultiFunPlayer & Configure

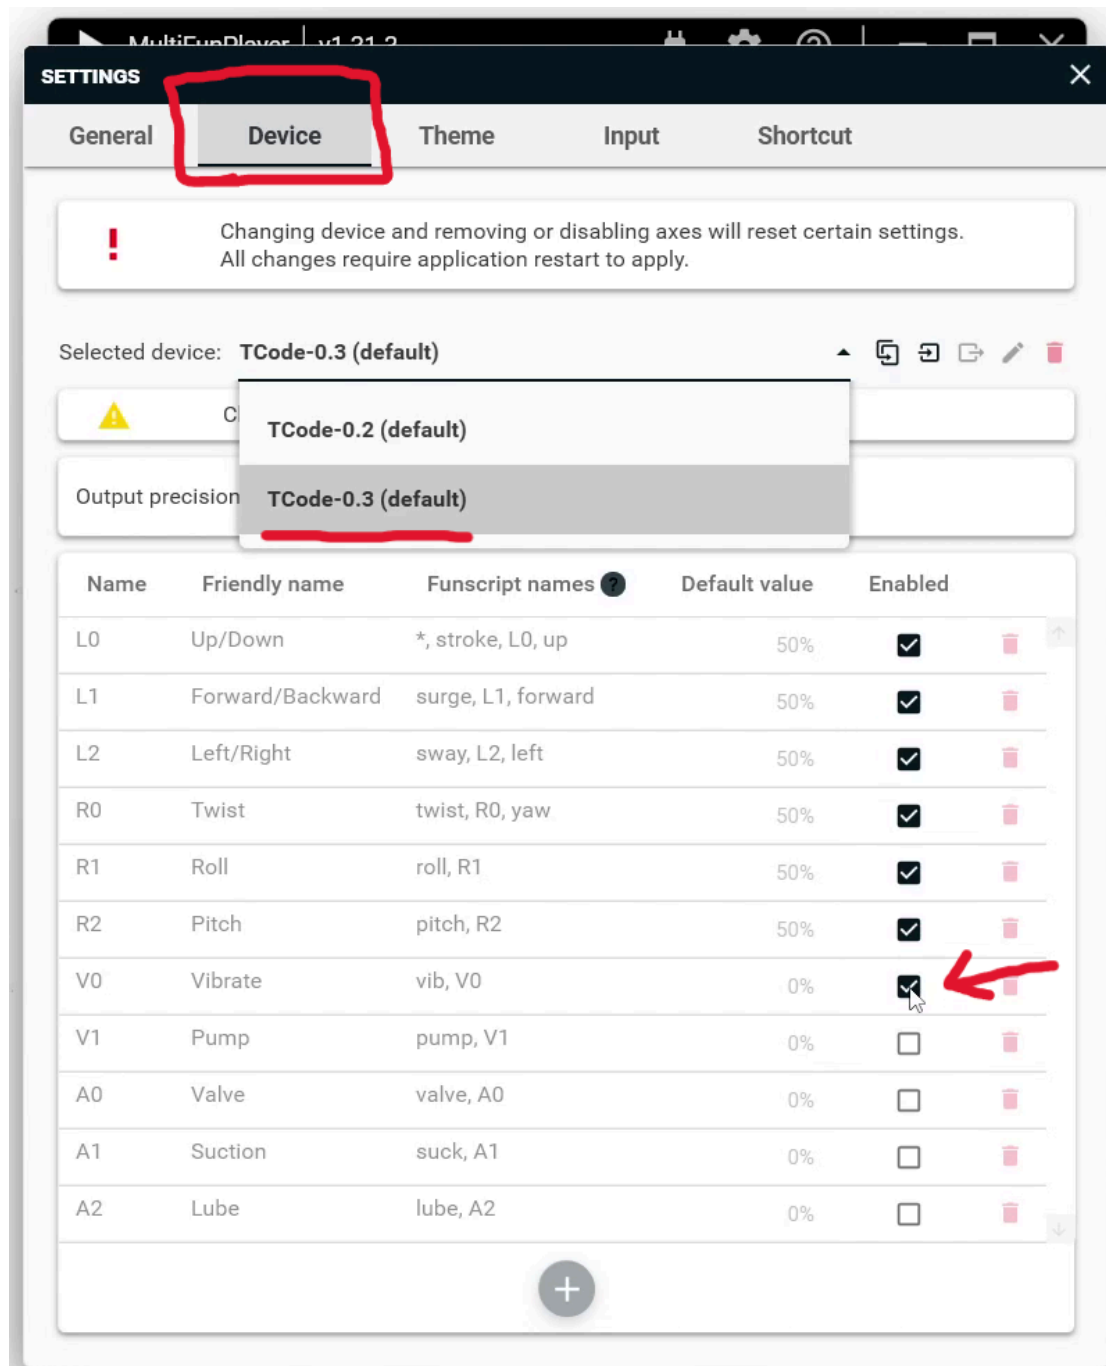

Now that your device is connected with Intiface you can launch the MultiFunPlayer app and start configuration. Once the app is running the first thing you will want to do is click the settings icon at the top right.

In the settings section, navigate to the device tab.

Switch to TCode-0.3 (default) in the select device dropdown.

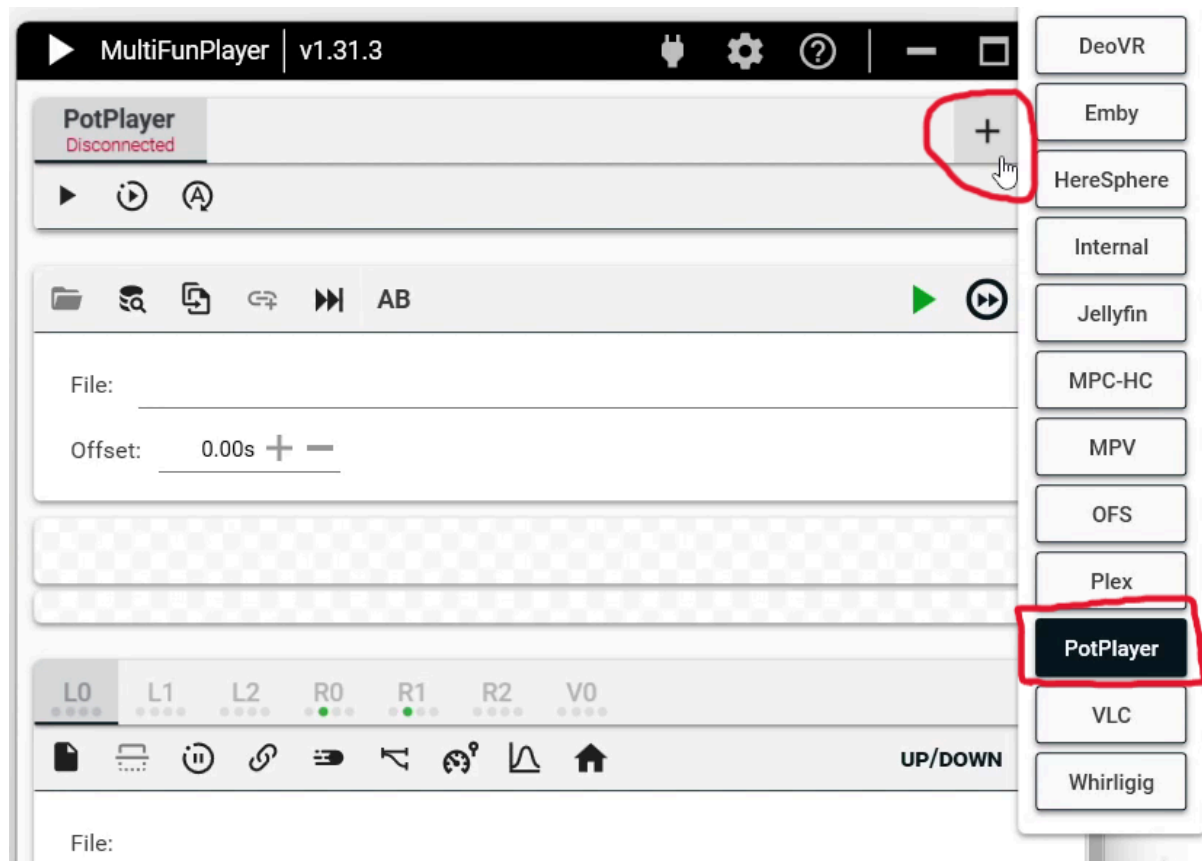

Then enable the V0 output to activate support for vibration toys.

Once you've completed this step, restart the application.

Launch the application again and then in the very top section click the plus sign and choose PotPlayer.

(Or your preferred video player)

Once it's connected properly it will show up like this.

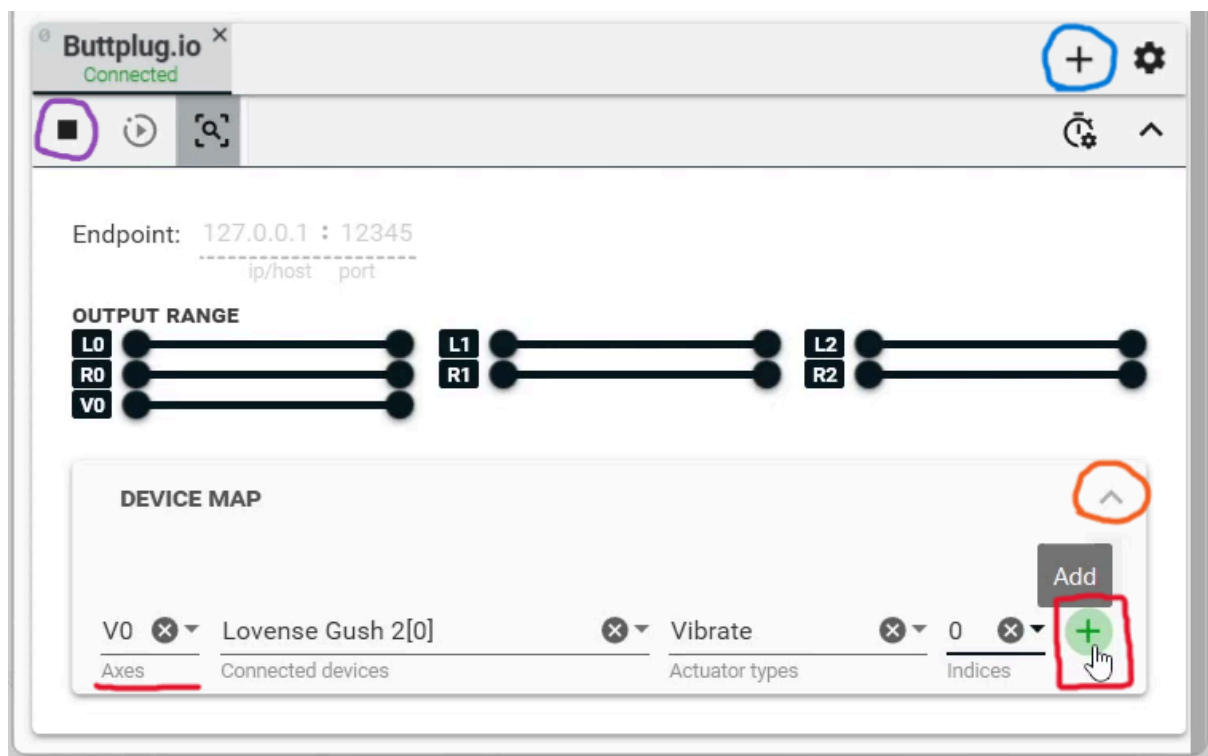

The next step is to navigate to the bottom of the application and click the plus button circled in **blue**. Choose Buttplug.io from the dropdown list.

Then click the play button circled in **purple** and connect the applications.

Once connected, expand the device map circled in **orange**.

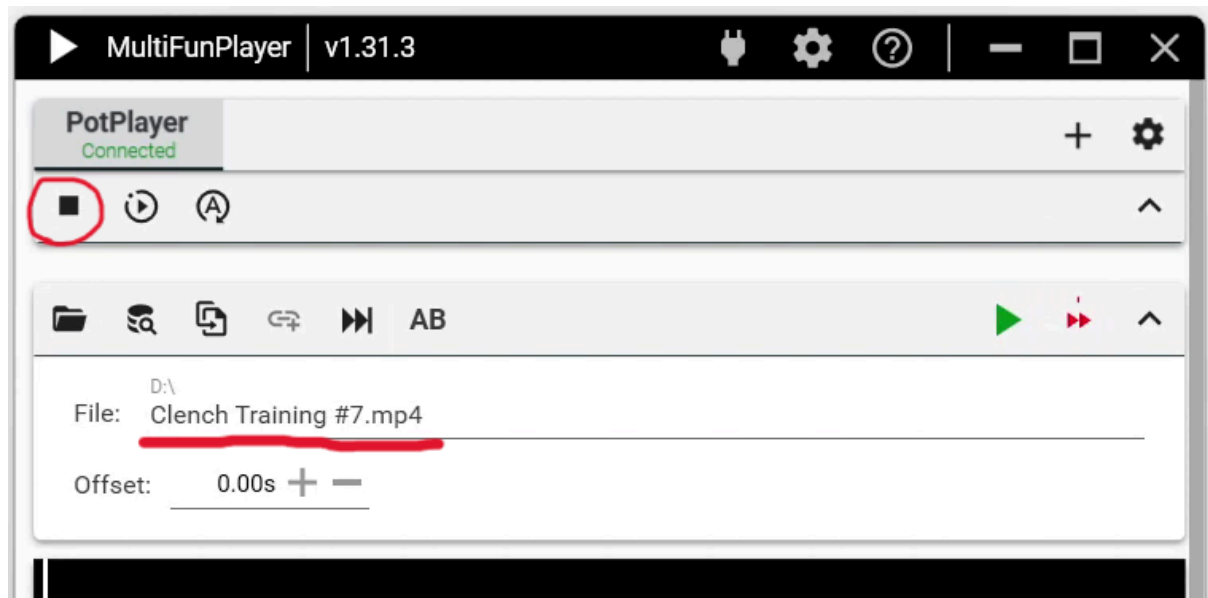

Choose **V0** for the axes, then fill in the other dropdowns and add the device with the button in the **red** box.

A successful connection will show up in green like this.

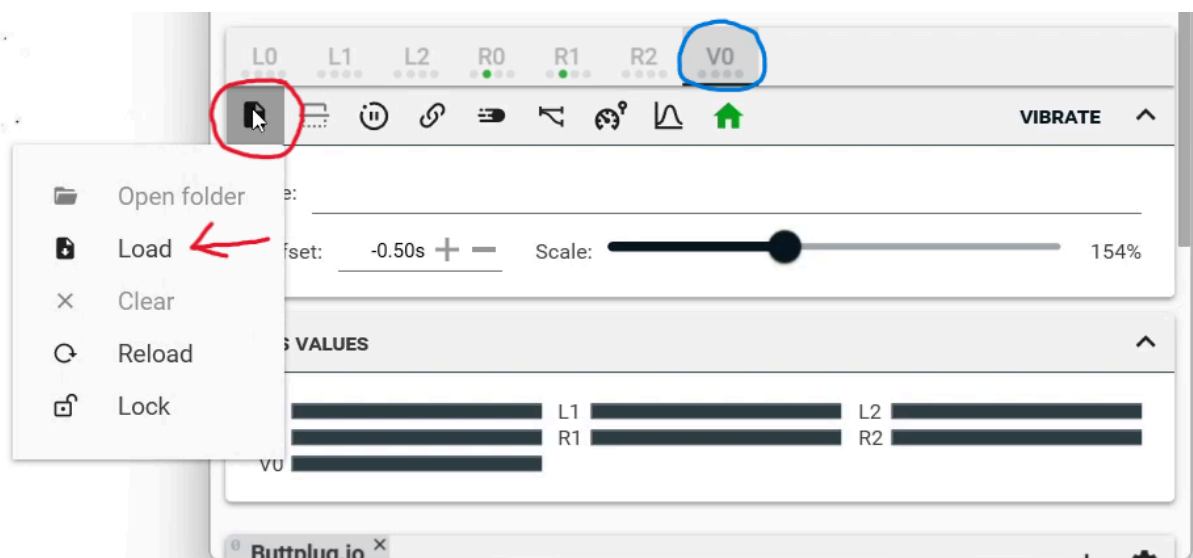

Now it's time to load your video. Open up the video in potplayer and ensure all other windows are closed, then click the play button. If running properly then the file name will show up in the dropdown.

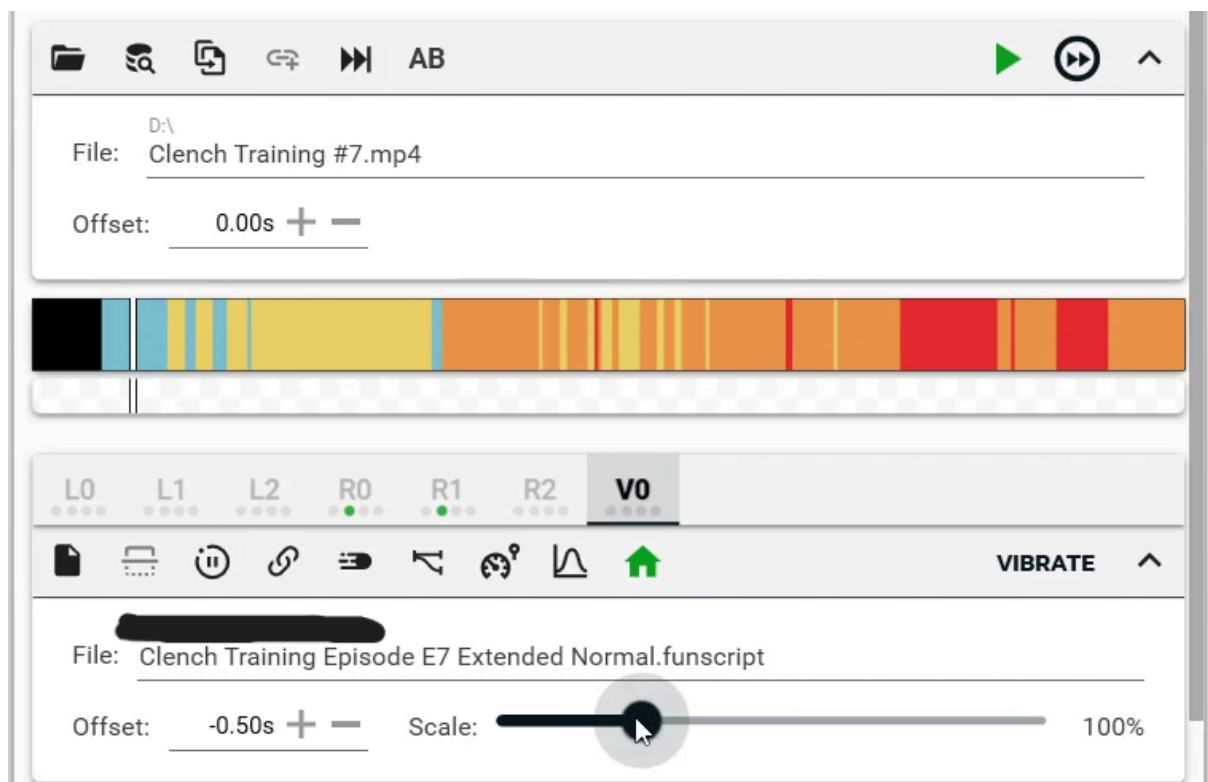

The final step is to load your funscript. Navigate to the V0 tab circled in **Blue**.

Then click the file icon circled in **red** and load your funscript file.

If everything is connected properly then the funscript section will light up to display the heat map.

From here the last step is to adjust your **offset** and **scale**.

Offset helps to synchronize the funscript with the video.

I suggest using -0.50s. But it will depend on the latency and speed of your bluetooth connection.

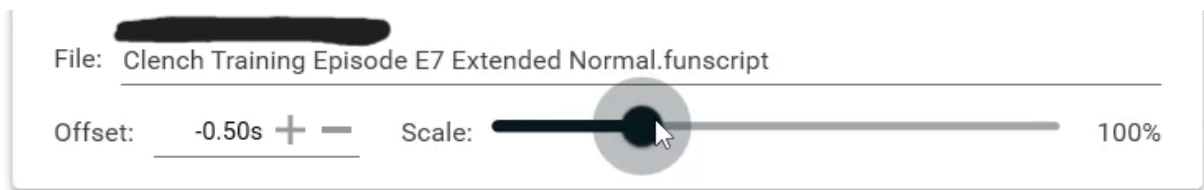

You can experiment to find what works best for you.

For metronome sequences like in the Clench series, the vibration is designed to start with each beat.

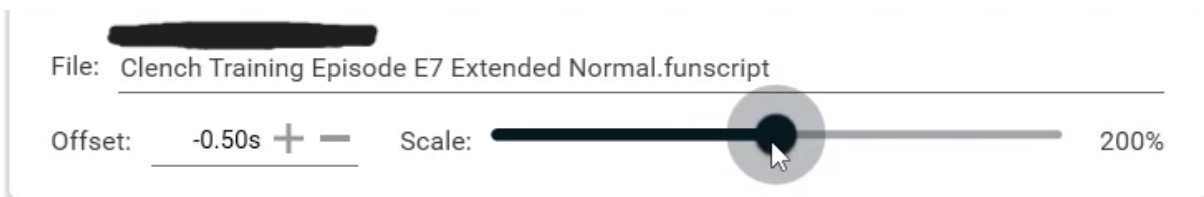

At this point you can play the video to make sure things are synced up properly.

If you run into issues not covered in this guide refer to the support documentation for [Intiface](#) and [MultiFunPlayer](#).

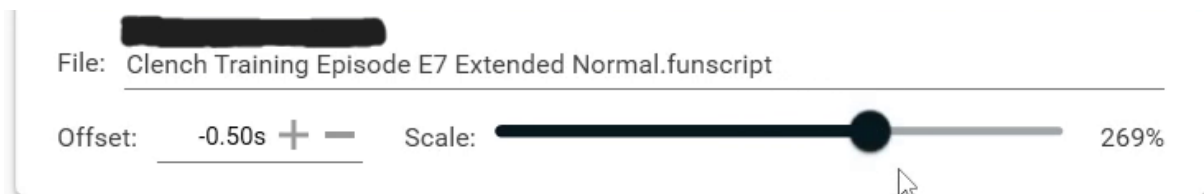

You can also adjust your **scale** (Difficulty), which controls the vibration strength.. Beginners can try the default setting of **100%**.

If you want a more intense challenge, you can try **150%-200%**

269% is a hard challenge. Anything higher than **300%** is extreme.

Step #3 Enjoy The Experience:

Once you've tested to make sure everything is working properly then it's time to get ready for your file.

Make sure your device is fully charged before every session.

If you are using the **Lovense Gush 2**, then the recommended position to enjoy the videos is to lie on your back in your bed.

To start, insert your cock inside the Gush 2 with the button facing away from you. Once your cock is inside the toy, place it in the crease of your leg facing upwards towards your stomach.

In this position your cock won't slip out of the toy.

Make sure to use one band to keep the gush in place, but don't make it too tight as you want to leave room for growth.

It's perfectly okay to start a video while your cock is soft, it may take some time until you achieve a full erection. Over time the pleasure will grow and become more intense.

If you are watching a **Clench Training** video, just relax and focus on clenching your cock to every beat. At the start you might not feel much due to the weight of the Gush. That's normal, just keep going.

Eventually you will get an erection. Then when you clench, your entire cock will bounce up with the Gush on it. Once you get to that point then the real fun begins. *Are you sure you want to give a succubus this much control over your cock?*

Good luck! <3
